

## Armature Stands

Rotary armature stands are used to support an armature during the repair process. Armature stands are sold in pairs, one with a fixed height and one is height adjustable by means of a handwheel. This set up allows the engineer to set the armature level where shaft diameters on each end of the armature are different.

<b>ASA</b>	<b>Armature Stand – Adjustable</b>
	Capacity: 1 tonne per stand
	Height: Adjustable from 850 mm to 950 mm
<b>ASN</b>	<b>Armature Stand – Non adjustable</b>
